Overview

Overview

The Reachability Realization Problem

The Reachability Realization Problem

- **Reachability value** of a node in a digraph:
  Number of nodes reachable from the given node.

The Reachability Realization Problem

- **Reachability value** of a node in a digraph:
  Number of nodes reachable from the given node.

- **Reachability Sequence**:
  A sequence of all reachability values of nodes in the digraph.

The Reachability Realization Problem

- **Reachability value** of a node in a digraph:
  Number of nodes reachable from the given node.
- **Reachability Sequence**:
  A sequence of all reachability values of nodes in the digraph.
- **Reachability Realization problem**:
  Is there a digraph with the given Reachability Sequence.

The Reachability Realization Problem

- **Reachability value** of a node in a digraph:
  Number of nodes reachable from the given node.

- **Reachability Sequence**:
  A sequence of all reachability values of nodes in the digraph.

- **Reachability Realization problem**:
  Is there a digraph with the given Reachability Sequence.

- We look at reachability realization for directed acyclic graphs (DAGs).

The Reachability Realization Problem

- **Reachability value** of a node in a digraph:
  Number of nodes reachable from the given node.
- **Reachability Sequence**:
  A sequence of all reachability values of nodes in the digraph.
- **Reachability Realization problem**:
  Is there a digraph with the given Reachability Sequence.
- We look at reachability realization for directed acyclic graphs (DAGs).
- Reminiscent of the Graph Realization problem on Degree Sequences [**?**, **?**, **?**].

The Reachability Realization Problem

- **Reachability value** of a node in a digraph:
  Number of nodes reachable from the given node.
- **Reachability Sequence**:
  A sequence of all reachability values of nodes in the digraph.
- **Reachability Realization problem**:
  Is there a digraph with the given Reachability Sequence.
- We look at reachability realization for directed acyclic graphs (DAGs).
- Reminiscent of the Graph Realization problem on Degree Sequences [**?**, **?**, **?**].

  Our results show an interesting interplay between the local property of degree and the global property of reachability.

Overview

Our Results

		Out-degree	
		Unbounded	Bounded
In-Degree	Unbounded (DAGs)		
	Bounded (Trees)		

Our Results

		Out-degree	
		Unbounded	Bounded
In-Degree	Unbounded (DAGs)	Linear-time	
	Bounded (Trees)		

Our Results

		Out-degree	
		Unbounded	Bounded
In-Degree	Unbounded (DAGs)	Linear-time	NP-Complete
	Bounded (Trees)	NP-Complete	NP-Complete

Our Results

			Out-degree	
			Unbounded	Bounded
In-Degree	Unbounded	(DAGs)	Linear-time	$(O(\log n), O(\log n))$
	Bounded	(Trees)	$(O(\log n), O(\log n))$	$(O(\log n), O(\log n))$
